

Elevate meeting productivity.

Video Collaboration made simple with award-winning software and hardware.

The Lifesize App

Secure for IT, easy for everyone.

Our cloud-based app is designed to support all of the different ways your team likes to collaborate — audio, web and video conferencing, chat and the ability to stream and record meetings all from one application.

Lifesize Video Room Solutions

A video solution for every meeting space.

We design, develop and produce our own conference room hardware and software. Our highly praised (and deservedly awarded) Lifesize® Icon™ Series is a complete video room solution, while our Lifesize Dash™ software-based room solution lets you transform your smallest rooms into collaboration hot spots.

Lifesize® Phone™ HD

The smartphone for your conference room.

Make video and audio calls with unrivaled audio quality, search the directory, share your screen and control the video pan/tilt/zoom right from the customizable touchscreen.

Lifesize Share™

Wireless presenting made simple.

Eliminate the clutter of cables, cords and connectors to deliver a wireless solution for presenting content in any meeting room. Lifesize Share uses ultrasonic audio waves to connect presenters to the room display, giving you plug-and-play screen sharing ... minus the plug.

A complete solution from the cloud to the conference room.

Web, Mobile and Desktop App

No more juggling collaboration apps to stay connected. Lifesize is a single app built for all of the ways your team connects and all of the devices they love to use.

Plug-and-Play Room Systems

The conference room is still the heart of most meetings. We offer HD conference room cameras and touchscreen phones for mini, small, medium and auditorium-sized meeting rooms.

Standards-Based Interoperability

Lifesize supports any-to-any connectivity irrespective of devices. We play well with others, including Skype for Business/ Teams, Slack, HipChat, Cisco and Polycom, to name a few.

Built around the features that matter most for the team collaboration.

Search-Based Directory

Just click on a name to start a call – no hold music, no waiting for moderators, no dial strings. It's as easy as making a call can be.

Audio-Only Conference Mode

Trade in your old audio-only solution for a more modern collaboration solution to cover video, web and audio conferencing with local dial-in numbers in more than 60 countries.

Scheduling and Calendar Integrations

Set recurring meetings and easily send guest invites from the mail and calendar apps you use every day. You can even see a list of upcoming meetings from your conference room system.

Chat and Group Chat

Lifesize chat adds another level of communication, a text level. We also integrate with chat apps like Slack and HipChat to add Lifesize video to your existing chat workflows.

Wireless Screen Sharing

Transform your video call into a web conference by sharing your screen or presentation. That way you can collaborate on a document in addition to communicating face-to-face.

Centralized Management Console

Admins can pull in-depth reports on usage and room participation, modify account-level settings like Single Sign-on and receive real-time health monitoring alerts from their browser.

Streaming and Recording

Stream meetings to up to 10,000 live attendees. You can also record and share meetings from your personal video library in your Lifesize account.

AES and TLS Encryption

Our controls, policies and vendor management are aligned with ISO best practices, and all communication streams support 128-bit AES and TLS encryption for all signaling by default.

Unlimited Guest Invites

Connect with anyone inside or outside of your organization with our seamless guest experience – no downloads or plugins required, and guests can join right from their browser.

24x7x365 Extreme Support

We offer a 99.9% uptime service level agreement, and our dedicated Extreme Support team is available 24x7x365 with a 1-hour initial meaningful response time.
