

Frequently Asked Questions

1. WHAT MAKES THE LIFESIZE PHONE, 2ND GENERATION COMPELLING?

Lifesize Phone brings touchscreen simplicity to the conference room. The phone features an intuitive touchscreen interface that is simple enough for anyone to use, reducing training and IT support of end users. The phone also enables control of both HD video and audio collaboration. No longer is a separate remote control needed to manage calls.

2. WHAT VIDEO CONTROL FUNCTIONS CAN I PERFORM WITH THE LIFESIZE PHONE?

The touchscreen interface of the Lifesize Phone enables powerful video control features. Users can access directories, share content, control cameras, change layouts, add callers and more with ease, all from the touchscreen.

3. WHAT ARE THE AUDIO FEATURES OF THE LIFESIZE PHONE?

The phone features superior audio quality, delivering the most engaging video communication experience and more productive video calls. A 360-degree microphone array with advanced beam-forming technology steers the microphones toward the direction of the talker for total room coverage. That means everyone in the conference room can be heard, no matter where they are sitting. Best-in-class frequency response is achieved through a powerful loudspeaker driver in a large, acoustically-suspended speaker enclosure. Because of this, distortion is reduced and voices and conversations are more true-to-life. Every voice will be heard in crystal-clear quality, and conversations won't be interrupted because of poor call quality.

4. CAN I USE THE LIFESIZE PHONE WITH ANY VIDEO ROOM SYSTEM?

Lifesize Phone is available and offered with the [Lifesize Icon 800](#), [Icon 600](#), [Icon 400](#), [Icon Flex](#) and any [Lifesize 220](#) video system ([Room 220i](#), [Room 220](#), [Team 220](#) and [Express 220](#)).

5. HOW IS THE LIFESIZE PHONE BETTER THAN PHONES AVAILABLE FROM OTHER VIDEO CONFERENCING PROVIDERS?

The Lifesize Phone is the first touchscreen conference phone available as part of a total solution, which includes the endpoint, camera and phone. Because of this, Lifesize is able to deliver the most full-featured, simplest-to-use video communication solution available. Our competitors' video systems require a separate, expensive device for touch control of video calls.

Superior audio conference phone quality of our phone is another point of competitive differentiation. The phone was designed from the ground up with the primary goal of providing the highest quality audio experience. But by including the intuitive touchscreen interface, we achieved superior audio quality and exceptional design. This has resulted in unrivaled audio performance with best-in-class frequency response. It utilizes the latest microphone and noise suppression technology, which provides superior clarity.

6. CAN I USE THE LIFESIZE PHONE AS A STAND-ALONE PHONE?

No, but when paired with a Lifesize Icon or Lifesize 220 video system that is connected to an IP-PBX, the Lifesize Phone can be used for audio-only calls.

7. CAN I USE LIFESIZE PHONE WITH OTHER VENDORS' VIDEO SYSTEMS SUCH AS POLYCOM OR CISCO?

Interoperability of the Lifesize Phone with non-Lifesize video systems is not supported.

8. HOW MANY MICROPHONES DOES THE LIFESIZE PHONE HAVE?

The Lifesize Phone has four beam-forming microphones placed in a 360-degree array for maximum voice pickup.

9. ARE MICPODS AVAILABLE FOR THE LIFESIZE PHONE?

Yes. The Lifesize Digital MicPod is the perfect complement to the Lifesize Phone. The Lifesize Digital MicPod automatically steers its three microphones toward the speaker and cancels distracting room noise for crystal-clear audio in even the largest collaboration spaces.

10. WHAT LANGUAGES DOES THE LIFESIZE PHONE SUPPORT, AND CAN I CUSTOMIZE IT?

This audio and video conference phone is tethered to the Lifesize codec and supports the language that is selected through the codec. A full list of supported languages is available upon request. The user interface cannot be customized, but the background, or "wallpaper," can be chosen from eight distinct options.
